

MALAKOFF

LIMITED

Malakoff Diving Services have been successfully providing subsea support to the Aquaculture sector for 20 years. Our dedicated Aquaculture Dive Teams located in Shetland and Orkney continue to deliver safe, efficient diving and topside support to our Clients in what continues to be a challenging, exciting and expanding sector.

Aquaculture Surface Supplied Frame

We understood that the transition and implementation from the use of SCUBA to Surface Supplied would be difficult initially and liaised with many of our clients for operational feedback.

To continue to meet our client's expectations, we designed our Aquaculture specific Surface Supplied Frames. Our Frames compact and self-contained design allow us to be able to be mobilized on site quickly while giving us the ability to set up on a variety of vessel deck without being vessel intrusive.

From Dry Suits to Diving Frames including umbilical's, our equipment can be contract specific and tailored to your requirement, giving our clients the security that the equipment will be maintained and cleaned to reduce potential contamination to stock and to comply with their Bio Security Policies.

Aquaculture Subsea Tasks

We undertake a variety of subsea tasks while working within aquaculture sites. From Mortality removal to net inspection, mooring integrity inspections to barge cleaning we can tailor our services to suit our client's containment and bio security policies.

Task regularly undertaken are –

- Net Inspection
- Mooring Integrity Inspection
- Barge Maintenance
- Anode Instillation
- Propeller Clearance
- Net Repairs
- Net Changes
- Mortality Removal
- Weight Removal and Re-attachment
- Seabed Surveys
- Equipment Recovery
